Small Cap Stocks

Small cap stocks refer to stocks with market capitalization between \$250 million and \$2 billion. These stocks can involve any exchange, but most exist on the NASDAQ or Over-The-Counter Bulletin Board. Advantages of investing in these stocks include:

Growth Potential

-Growth Potential: Even the largest companies were once small businesses. Small caps allow investors to become part of the company on the ground floor.

No Mutual Funds

-Absence of Mutual Funds: SEC regulations make it very difficult for large mutual funds to invest in small cap stocks. This provides a financial advantage to individual investors.

Market Obscurity

-Market Obscurity: Small cap stocks are often under-recognized or undiscovered by Wall Street. Because of their lack of coverage, they are often not priced properly . This provides investors with the opportunity to earn large profits .
